No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 63, P

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Description

Novel genes which are differentially regulated in prostate cancer, useful for diagnosing prostate cancer in prostate tissue sample and assessing therapeutic or preventive intervention in prostate cancer patients.

WPI; 2003-058520/05. N-PSDB; ABX10404.

Claim 1; Page 413-414; 416pp; English

The invention describes genes (I) which are differentially regulated in prostate cancer. (I) Is useful for diagnosing a prostate cancer in a sample comprising prostate tissue, which involves determining the number of target genes which are differentially-regulated in the sample, where the number is indicative of the probability that the sample comprises prostate cancer. (I) Is useful for assessing a therapeutic or preventive intervention in a subject having a prostate cancer, which involves determining the expression levels in a sample comprising prostate tissue of target genes which are differentially-regulated in prostate cancer.

Treterably, une explaint that a case, to gain, an explaint of a polypeptide differentially-regulated in prostate cancer cells, which involves contacting a polypeptide differentially-regulated in prostate cancer cells, which involves contacting a polypeptide differentially regulated cancer cells, which involves contacting a polypeptide differentially regulated in prostate cancer cells with a test agent under conditions effective for the test agent to modulates the biological activity (I) is useful as molecular markers, as drug targets, and for detecring, (I) preventing or treating, grading, assessing, monitoring, prognosticating, preventing or treating, determining predisposition to diseases and conditions especially relating to prostate cancer. (I) and its expression products are used in the diagnostic test to assay for presence of cancer conditions especially relating to prostate cancer. (I) and its expression products are used in the diagnostic, the nature of genetic defect, etc. (I) is useful for assessing cancer e.g., to determine the type of cancer, its stage of development, the nature of genetic defect, etc. (I) can also be used for expressing the polypeptide and thus for searching specific binding partners of the polypeptide and thus for searching specific binding partners of the polypeptide and thus for specific genes, and groups of genes, expressed in pathways (I) in therapeutic applications to treat prostate cancer. The identification of specific genes, and groups of genes, expressed in pathways which are useful in diagnostic, therapeutic, and clinically continued and disease pathways and the delineations of targets in these applications. This is the amino acid sequence of a protein differentially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         EDMAKADKARYEREMKTYIPPKGETKKKFKDPNAPKRPPSAFFLFCSEYRPKIKGEHPGL 120

The invention relates to high mobility group (HMG) protein comprising DNA binding motifes termed HMG A box and HMG B box. HMG A box or a non-chain motifes termed HMG A box inhibits the release of a pro-inflammatory cytokine from a vertebrate cell. The methods and compositions of the invention are useful for inhibiting a condition characterised by activation of an inflammatory cytokine cascade such as endotoxic shock, rheumatoid arthritis, appendicitis, peptic or duodenal ulcers, Crohn's disease, peritonitis, hepatitis, peptic or duodenal ulcers, Crohn's classe, pronchitis, emphysema, HIV infection, candidisais, malaria, filariasis, amoebiaais, dermatitis, atherosclerosis, Alzheimer's disease, myocardiis, myocardial ischaemia, meningitis, multiple sclerosis, gout, cerebral infarction, neuritis, Goodpasture's asyndrome, graft-versus-host disease, diabetes and Hodgkin's disease. The invention is useful in gene therapy. The present sequence is human HMGI (also termed as HMGBI)
                                                                                                                                                                                                                                                                                                                               New isolated polypeptide having a vertebrate HWG A box, useful for inhibiting a condition associated with an activated inflammatory cytokine cascade, e.g. endotoxic shock, myocardial infarction, asthma, HIV infection, malaria and diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

This invention describes a novel method comprising using high mobility group B proteins (HMGB) as target molecules for development or group B proteins (HMGB) as target molecules for development or compositions (compositions (for treatment, prevention or diagnosis of endometrial diseases, or as contraceptives. The products of the invention care used in kit for characterising the status of the endometrium, cycle. The proteins used in the invention can be HMGB1, 2 or 3, or SP100-HMG, and the preferred interaction partner for HMGB1 is RAGE (receptor Cycle. The proteins used in the invention can be HMGB1, 2 or 3, or SP100-HMG, and the preferred interaction partner for HMGB1 is RAGE (receptor Cycle and cytostatic activity. HMGB is part of a nuclear transcription factor complex and, extracellularly, a ligand for nuclear transcription factor complex and, extracellularly, a ligand for involved in tumour metastasis. The products of the invention are used to develop treatments, preventions or diagnoses of endometrial disease, particularly endometriosis or polyps, hyperplasia or carcinoma of the endometrium, also contraceptives and methods for assessing status of the complex contraceptives and methods for assessing status of the invention contraceptives and methods for assessing status of the invention contraceptives and methods for assessing status of the invention contraceptives and methods for assessing status of the invention contraceptives and methods for assessing status of the invention contraceptives and methods for assessing status of the invention contraceptives and methods for assessing status of the invention contraceptives and methods for assessing status of the invention contraceptives and methods for assessing status of the invention contraceptives and methods for assessing status of the invention contraceptives and methods for assessing status of the invention contraceptives and methods for assessing status of the invention contraceptives and methods for assessing status of the invention contraceptines.
                                                                                   high mobility group B protein; HMGB1; HMGB2; HMGB3; endometrial disease, contraceptive; endometrium; pregnancy; menstrual cycle irregularity; RAGE; receptor for advanced glycation end; gynaecological; cytostatic; nuclear transcription factor complex; tumour metastasis; endometriosis; polyps; hyperplasia; carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Developing treatment and diagnosis of endometrial disorders, using mobility group B proteins, or related nucleic acid or interaction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; SEQ ID NO 3; 43pp; German.

group B proteins (HMGB) as target molecules for development or preparation of compositions (for treatment, prevention or diagnosis of endometrial diseases, or as contraceptives. The products of the invention are used in kit for characterising the status of the endometrium, especially for presence of pregnancy or irregularities in the menstrual order. The proteins used in the invention can be HMGB1, 2 or 3, or SP100-HMG, and the preferred interaction partner for HMGB1 is RAGE (receptor for advanced glycation end products). The products of the invention have synaecological, contraceptive and cytostatic activity. HMGB is part of a nuclear transcription factor complex and, extracellularly, a ligand for the surface RAGE (receptor for advanced glycation end products) which is involved in tumour metastasis. The products of the invention are used to develop treatments, preventions or diagnoses of endometrial disease, particularly endometricals or polypes, hyperplasia or carcinoma of the endometrium, also contraceptives and methods for assessing status of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   EDMAKADKARYEREMKTYIPPKGETKKKFKDPNAPKRPPSAFFLFCSEYRPKIKGEHPGL 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to novel DNA and protein sequences which ser associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vii) for inhibiting the activity of CAP; (ix) for diagnosing carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as markers of carcinoma including lymphoma. The present sequence is one such CAP. Note: This patent is an equivalent to basic patent US2002182586AI, for which no sequence data was published

This invention relates to a novel vaccine for promoting amyloid beta 42 aggregation inhibitory effect and/or amyloid beta 42 phagocytosis by microglia, which comprises a high mobility group protein 1 (HMGI), its partial peptide, or its salt. The invention may be useful for the production of compounds with a nootropic or neuroprotective activity acting as promoters of inhibition of amyloid beta 42 aggregation or promoters of amyloid beta 42 phagocytosis by microglia. The invention may also be useful for the production of a vaccine. The invention is useful for prophylaxis and/or treatment of Down's syndrome or amyloid angiopathy or preventing brain amyloidosis such as Alzheimer's disease. The present sequence is that of the protein encoded by the human high mobility group protein 1 (HMGI) gene which may be used during the creation of the novel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

Also described are: an antibody attached to a polypeptide comprising an HMGB B box or its functional variant; stimulating or increasing an immune response in an individual in need of immunostimulation; and treating cancer in an individual. The composition is useful for stimulating or increasing an immune response in an individual in need of immunostimulation or for treating cancer in an individual. This is the amino acid sequence of human high mobility group box 1 (HMGI) that can be used to stimulate cytokine activity and increase immune response to assist in treating disease.

```

```
The invention relates to a polypeptide comprising a high mobility group box protein (HMGB) A or B box. The HMGB A or B box can inhibit release of a proinflammatory cytokine from a cell treated with an HMGB protein. The invention also relates to a purified preparation of antibodies that specifically bind to the HMGB B box but do not specifically bind to one. B proinflammatory cytokine from a cell treated with HMGB, a method for effecting weight loss or treating obesity in a patient, a method of determining whether a compound inhibits inflammation, a pharmaceutical determining whether a compound inhibits inflammation, a pharmaceutical composition comprising an HMGB protein or an antibody that binds to the protein, an agent that inhibits TMP biological activity and a method of treating a condition in a patient characterised by activation of an inflammatory cytokine cascade. Effecting weight loss or treating obesity in a patient comprises administering to the patient an amount of the polypeptide, antibodies, composition and methods are useful in treating obesity and conditions characterised by activation of
                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; high mobility group box 1; HWGB1; HWGB A box; HWGB B box; proinflammatory cytokine; weight loss; obesity; inflammation; inflammatory cytokine ascade, sepsis; allograft rejection; rheumatord arthritis; asthma; lupus; adult respiratory distress syndrome; chronic obstructive pulmonary disease; psoriasis; pancratitis; reperfusion ischaemia; ashheri schaemia; organic ischaemia; reperfusion ischaemia; Behcet's disease; graft-versus-host disease; Crohn's disease; ulcerative colitis; multiple sclerosis; cachexia.
                        New high mobility group box proteins, useful in treating obesity, sepsis, rheumatoid arthritis, asthma, psoriasis, burns, myocardial ischemia, Behcet's disease, ulcerative colitis, multiple sclerosis, or cachexia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    an inflammatory cytokine cascade, e.g. sepsis, allograft rejection, rheumatoid arthritis, asthma, lupus, adult respiratory distress syndrome, chronic obstructive pulmonary disease, psoriasis, pancreatitis, peritonitis, burns, myocardial ischaemia, organic ischaemia, reperfusion ischaemia, Behcet's disease, graft-versus-host disease, Crohn's disease, ulcerative colitis, multiple sclerosis or cachexia. The sequences and their encoded protein are useful for treating a very wide range of diseases:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Use of nucleic acids encoding basic DNA-binding proteins, and their translation or transcription products, for treating diseases associated with e.g. angiogenesis, neovascularization or wound healing, also for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  요
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ठ
                                                                   Delypeptides, and their related nucleic ascids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide perfective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide of card and antibody specific for a TAT polypeptide; a peptide or organic molecule which binds to a TAT polypeptide; fusion proteins comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; fusion proteins comprising a TAT polypeptide; and methods and compositions for the treatment or diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, cancers such as breast cancer, colorectal cancer, lung cancer, carvical cancer, inver cancer, bladder cancer, pancreatic cancer, cervical cancer, cancers of the central necrosed system, melanoma and leukaemia. TAT nucleic acids may further be used as hybridisation probes, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence

The present invention relates to new vascular endothelial growth factor (VEGF) proteins useful for skin healing of a skin graft onto underlying tissue. The method involves contacting a skin graft/flap or underlying tissue with an agent chosen from vascular endothelial growth factor C (VEGF-C) polymucleotides, vEGF-C polymeptides, VEGF-D polymucleotides, or amount effective to reduce edema or increase perfusion at skin graft or flap. The composition comprises a gene therapy vector that encodes VEGF-C polymotleotide. The VEGF-C polympeptides are therapy vector that encodes VEGF-2 polymotleotides. The VEGF-C polympeptides are therapy vector that encodes VEGF-3 ligand amino acid sequence chosen from a prepro-VEGF-C sequence, and fragments that binds VEGF-3, where Z comprises a heparin-binding amino acid sequence, and B comprises a comprises a heparin-binding amino acid sequence, and B comprises a comprises a heparin-binding amino acid sequence, and B comprises a comprise will be set to be sequence, and VEGF-D polympetides, VEGF-C polymotleotides, vEGF-C polympetides, VEGF-D polymotleotides, and VEGF-D polympetides, vEGF-C polymotleotides, and vEGF-C polympetides, vEGF-C polymotleotides, and vEGF-D polympetides or vEGF homology domain (VHD) and a heparin-binding domain. Vulnerary. Gene vEGF homology domain (VHD) and a heparin-binding domain. Vulnerary is breast are constructive surgery. The reconstructive surgery, a liposuction procedure, or skin cancer, skin grafts, cosmetic surgery and improves complications resulting from surgery which includes excessive bleeding, such as hematomas, bruising and wound-healing difficulties, pain, edema, necrosis and technial general requence is amphoterin protein, which contains a heparin binding domain related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 EDMAKADKARYEREMKTYIPPKGETKKKFKDPNAPKRPPSAFFLFCSEYRPKIKGEHPGL 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ठ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to heparin-binding vascular endothelial growth factor receptor 3 (VEGRR-3) proteins and encoding polynucleotides. The heparin binding VEGRR-3 proteins are used for stimulating lymphangiogenesis or angiogenesis in a mammal, and for modulating the growth of mammalian endothelial cells, mammalian endothelial precursor cells or hematopoictic progenitor cells. The polypeptide may also be used for promoting recruitment, proliferation, differentiation, migration or survival of neuronal cells or neuronal precursor cells, and for treating neurodegenerative disorder, e.g. Alzheimer's diseases, Parkinson's disease, Huntington's disease, motor neuron disease, Amyotrophic Lateral Sclerosis (ALS), dementia, or cerebral palsy. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid encoding a PRO polypeptide. The polypeptide, agonist or an antagonist, antibody, composition, and method are useful for diagnosing and treating an immune related disorder, e.g. systemic lupus erythematosus, rheumatoid arthritis. The present sequence represents a DNA encoding a PRO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9

High mobility group box; HWGB1; immune disorder; infection; immunosuppressive; autoimmune disease; allergy; antiallergic; ulcertative colitis; antiaflammatory; antiulcer; gastrointestinal-gen.; Crohns disease; inflammation; asthma; antiathmatic; rethematoid arthritis; antirheumatic; antiathritis; antirheumatic; antiappressis; antipporiatic; systemic lupus erythematosus; dermatological; antiulcer. Human high mobility group box protein HMGB1. (NSHO-) NORTH SHORE-LONG ISLAND JEWISH RES Location/Qualifiers 32. .85 /label= A_box /label= B_box 10-SEP-2004; 2004WO-US029540 10-SEP-2003; 2003US-0502349P. (GEHO) GEN HOSPITAL CORP .161 Warren HS, Tracey KJ; WPI; 2005-233421/24. WO2005025604-A2 Homo sapiens 24-MAR-2005

Treating an immune pathology in an individual comprises administering an amount of a high mobility group box (HMGB) polypeptide comprising a vertebrate or a non-naturally occurring HMGB A or B box, or its immunosuppressive fragment.

Claim 6; SEQ ID NO 1; 57pp; English.

The invention is based on the discovery that high mobility group box protein 1 (HMGB1, also known as high mobility group-1 or HMG1), when administered with an antigen, diminishes the antibody response to the administered antigen. HMGB1 has 2 DNA binding motifs, termed the A and B boxes. A claimed method of treating an immune pathology in an individual comprises administering a HMGB polypeptide comprising a vertebrate HMGB A box, a non-naturally-occurring HMGB A box, or an immunosuppressive fragment of the vertebrate or non-natural HMGB A box. The immune pathology is induced by the administration of a non-human antigen, non-self material (e.g. a cell or tissue such as bone marrow cells) or adjuvant to the individual, by the transplantation of an organ into the individual, or by infection from a microorganism. Claimed methods of individual, or by infection from a microorganism. Claimed methods of pathology in an individual or decreasing an immune response to an administered non-human antisen comprise administering a HMGB A box, a non-naturally-occurring HMGB A box, or an immunosuppressive fragment of the vertebrate HMGB A box, or an immunosuppressive fragment of the vertebrate in an individual comprises administering a wertebrate HMGB A box, or an immunosuppressive fragment or non-naturally-occurring HMGB A box, or an immunosuppressive administering a mann-naturally-occurring HMGB A box, or an immunosuppressive and a successive or non-naturally-occurring HMGB A box, or an immunosuppressive and a successive or non-naturally and a successive or non œ as the fragment of these, and a vertebrate or non-naturally-occurring HMGB is box. The HMGB polypeptide is preferably a HMGBI peptide and may be truncated at the C-terminus. The autoimmune disease is allergy, ulcerative colitis, Crohn's disease, asthma, rheumatoid arthritis, psoriasis or systemic lupus erythematosus (all claimed). The present sequence is that of the human HMGBI protein, which can be used as the HMGB polypeptide in methods of the invention.

The invention provides antibodies, or their antigen-binding fragments, that bind to a vertebrate high mobility group box (HWGB) polypeptide, to methods of detecting and/or identifying an agent that binds to an HWGB polypeptide, methods of treating a condition in a subject characterized by activation of an inflammatory cytokine cascade, and methods of Disclosure, SEQ ID NO 2; 123pp; English.

Sequence 215 AA;

```
New antibody or its antigen-binding fragment specific to a vertebrate high mobility group box (HMGB) A box that inhibits release of a proinflammatory cytokine from a cell treated with HMGB protein, useful
                                                                                                                                             High mobility group box; HMGB1; monoclonal antibody; antibody therapy; sepsis, antibacterial immunosuppressive; graft rejection; arthritis; antiarthritic; asthma; antiathmatic; lupus erythematosus; antiinflammatory; inflammation; dermatological; respiratory distress syndrome; respiratory-distress syndrome; respiratory-distress syndrome; respiratory-distress syndrome; respiratory-distress; peritoric; chronic obstructive pulmonary disease; pancreatitis; peritonitis; burns; vulnerary; ischemia; vasotropic; Behcets disease; garaft versus host disease; inflammatory bowel disease; asthmatory cachexis; anabolic; infection; musculoskeletal disease; immune disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ä

```
detecting an HMGB polypeptide in a sample. The antibody (or antigen-
binding fragment) binds to a vertebrate HMGB A box but does not
specifically bind to non-A box epitopes of HMGB, and inhibits release of
a proinflammatory cytokine from a vertebrate cell treated with an HMGB
protein. A method of treating a condition characterized by activation of
an inflammatory cytokine cascade comprises administering an antibody of
the invention, or its antigen-binding fragment. The condition is selected
from sepsis, allograft rejection, arthritis, asthma, lupus, adult
respiratory distress syndrome, chronic obstructive pulmonary disease,
psoriasis, pancreatitis, peritonitis, burns, ischemia, Behcet's disease,
graft versus host disease inflammatory bowel disease, multiple sclerosis
and cachesia, especially sepsis, arthritis, or lupus. The present
sequence is that of the A box of human HMGB1 ADY855012. An identical

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A;Cross-references: UNIPROT:P07155; UNIPARC:UPI00000008A6; GB:M64986; NID:g202884; PIDN::
A;Note: part of this sequence, including the amino end of the mature protein, was confirm
A;Note: the authors used antibodies to synthetic peptides to demonstrate this protein in
h-mobility group proteins

-!- SIMILARITY: Belongs to the HMG1/HMG2 protein family.
-!- SIMILARITY: Contains 2 HMG box DNA-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SUBCELLULAR LOCATION: Nuclear and also cytoplasmic, associated
